

## Project Development Phase Model Performance Test

Date	10 November 2022
Team ID	PNT2022TMID21580
Project Name	Visualizing and predicting heart disease using an interactive dashboard
Maximum Marks	10 Marks

### Model Performance Testing:

S.No	Parameter	Screenshot / Values
1.	Dashboard design	No of Visualizations / Graphs - 11
2.	Data Responsiveness	
3.	Amount Data to Rendered (DB2 Metrics)	

4.

Utilization of Data Filters

HOME				ABOUT		PREDICT				LOGOUT			
AGE	GENDER	CHEST PAIN TYPE	RESTING BP	SERUM CHOLESTROL	FASTING BLOOD SUGAR	REST ECG	MAX HEART RATE	INDUCED AGINA	OLD PEAK	PEAK ST	NO OF MAJOR VESSELS	RESULT	
Male	Atypical Angina	132	500	Yes	Normal	200	Yes	100	Downsloping	3	Fixed	Not affected	
Male	non anginal pain	198	500	No	Normal	11	Yes	1	Downsloping	4	Defect	Not affected

5.

Effective User Story

No of Scene Added –

**WHO WE ARE ?**

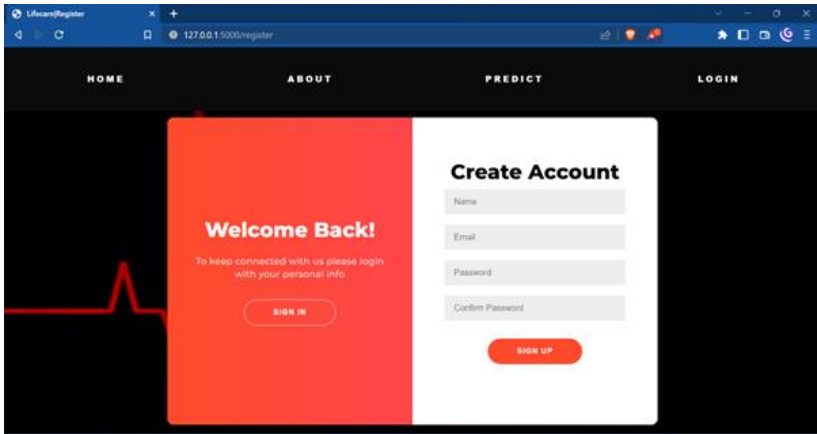

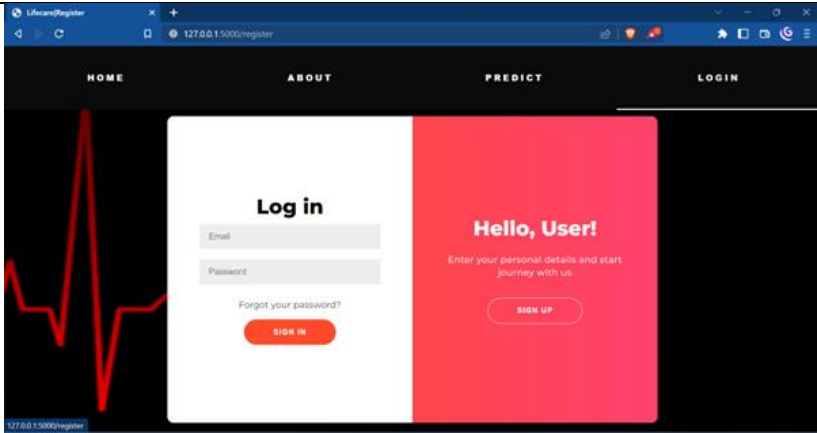

**We are helping the health sector**

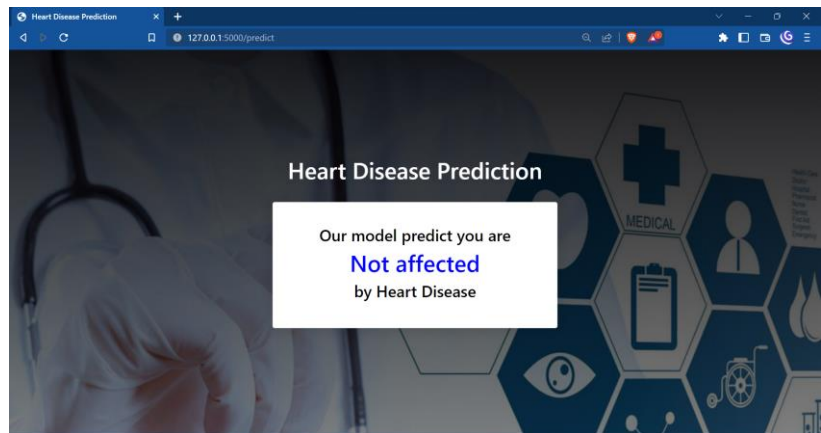

Among various life-threatening diseases, heart disease has garnered a great deal of attention in medical research. The diagnosis of heart disease is a challenging task, which can offer automated predictions about the heart condition of a patient so that further treatment can be made effective. Cardiovascular diseases have become a cause of concern in increasing the mortality rate. So in order to prevent these diseases we need a solid prediction system in place to effectively diagnose these diseases at a pretty faster rate and save many human lives. So in order to make a clear vision for patients who are really confused about their symptoms, our application would be useful for them to predict whether they are being diagnosed by the cardiovascular disease.
